Problem Definition

Final CAD OTV Design

Key Features

Motor Mount

**Ramp w/
Pressure Plate**

Wifi Module

Strain Gauges

Arduino Uno

Motor

Wheel

Wheel Mounts

Caster Wheel

H-Bridge

Design Evolution

Team & OTV Performance

OTV Performance

- **220/200 MS7**
- **Effective Design**
- **Fairly consistent**
- **Light and small**
- **Cheap**
- **Easy to build!**

An optimization could include working on consistency for 100 point runs – includes changes to strain gauges.

Team Performance

- **Iteration**
- **Perseverance**
- **Communication**

Some improvements could look like making better use of Asana for organization and time management (completing things ahead of time).

Scan for supplemental materials!
